

INFORMATION AND COMMUNICATION TECHNOLOGY (6 ECTS)

The course has the task to introduce students with the general culture of information and communication technology (ICT) and teach them to use various tools to quickly resolve the problem. Repeat the basics number systems, analyze computer material, introducing the basic concepts of operating systems, and come to MS Offices. Students will learn to create a fracture text, image processing, and create presentations, web pages, and simple databases. In the last part, we will touch on very current topics: mobile communications, computer networks, e-commerce, multimedia, e-learning and the relationship between ethics and ICT. Course provides the basis for the series: E-commerce, management information systems, project management, business dynamics, etc. It is expected that within the course students have an opportunity to become familiar with Blackboard, courseware, one of the best tools for communication within students and professors, as well as for evaluation and knowledge self-evaluation.
